e2v selects EdXact's Jivaro tools

 06/11/2007 **by Pallavi B**
[Print](#) | [Email Colleague](#) | [Add Comment](#) | [Comments \(0\)](#)

EdXact, an electronic design tools company, has announced that its Jivaro netlist reduction tool was chosen by e2v, a UK-based developer and manufacturer of specialised components and subsystems.

e2v is using Jivaro to help verifying its next generation high speed A/D converters, which is developed using Jazz Semiconductor's advanced SiGe BiCMOS 0.18-micron process.

The new converter family includes quad-8 bits devices capable of delivering conversion rates from 1.25 Gsps to 5 Gsps from a single chip at 1W per channel.

EdXact provides software solutions that help to accelerate the overall backend IC physical verification cycle. Jivaro tools apply user-controllable reduction techniques upon parasitic data files obtained from layout extraction tools.
