Electronic Design:
Extraction, Analysis and Control Tools

July 16, 2008 10:00 AM Eastern Daylight Time

edXact Joins Synopsys in-Sync Interoperability Program

GRENOBLE, France--([BUSINESS WIRE](#))--Backend verification specialist edXact SA today announced that it has joined Synopsys' in-Sync® interoperability program. The in-Sync program establishes relationships between Synopsys and other EDA vendors to enable customer flows to run as smoothly as possible.

edXact (Voiron, France) provides software solutions that help semiconductor designers to remove the backend verification bottleneck, while maintaining their existing design flow and achieving tape-out accuracy. Through the in-Sync program, edXact has access to Synopsys' timing analysis and fastspice tools, as well as its parasitic extraction toolset, to establish and test a smooth interoperable design flow between Jivaro™ and Synopsys' products for the benefit of its mutual customers.

“We recognize that designers don't have the time to fix interoperability problems between software tools,” said Karen Bartleson, sr. director of Interoperability Programs at Synopsys. “in-Sync establishes relationships with EDA vendors in order to facilitate this interoperability.”

“We are excited to be part of the in-Sync program,” said Mathias Silvant, edXact President. “This means that a number of customers who are demanding or using the proposed flows will benefit from our collaboration.”

About EdXact

Founded in 2004, edXact SA focuses on electronic design tools aimed at physical verification tasks. edXact's innovative model order reduction technology helps accelerate extensive backend verifications in complex IC design cycles. edXact's headquarters are based in Grenoble area, France.
