Reference: 36673

EdXact has signed a multi-year distribution agreement with Icon Design Automation in India. Under this agreement, Icon will distribute all of EdXact's tools, including netlist reduction tools Jivaro A for analogue and RF designs, Jivaro D for digital and mixed-signal circuits and Comanche, a parasitics rule checking analyser. Jivaro technology can improve the performance of simulation and analysis tools in advanced nanometer design flows. The technology is an independent industrial netlist reduction technology, which applies on post-layout extracted netlists. Jivaro remodels and reduces the parasitic overhead in such a way that the simulation tool in place can simulate larger netlists, or reduce the memory footprint and execution time. The technology is integrated into other companies' tools, such as those of Helic and Agilent.
